

JELU VET

Raw Fibre Concentrate

The natural plant fibre in poultry production for:

- Improved intestinal health
- Improved nutrient uptake
- Optimized faeces consistency
- Improved protein absorption
- Reduced ammonia emissions
- Better health
- Lower mortality rates
- Better fattening results

Natural and efficient feed supplement

JELUVET raw fibre concentrates are manufactured without any auxiliaries and additives. They are a natural feed supplement for efficient poultry production. JELUVET improves stable hygiene, reduces mortality rate and ensures a consistently high level of fattening success.

Healthier animals ...

The fact that traditional raw fibre sources are contaminated with mycotoxin to a greater or lesser extent, is repeatedly causing problems for breeding farms. Even in low concentrations, mould toxins have a sustainable harmful effect on the farm animals' health. This leads to considerable productivity losses in poultry production. JELUVET, in contrast, is absolutely free of mycotoxins, ensuring healthier and more resistant livestock.

...lead to better fattening results

Common raw fibre sources have a raw fibre content of about 10 to 15%. JELUVET, however, has a consistent raw fibre content (ADF) of more than 70%. Therefore the concentrate allows a standardisable and nutrient-independent dosage.

Due to its special fibrillar structure, JELUVET is beneficial for the intestinal villi and thus relieves the digestive system, compared to common, coarsely structured raw fibre sources. As a consequence, the animals are more resistant to diarrhoea.

In addition, a healthy intestine is able to better absorb proteins. The fat content in the carcass is reduced, the usable muscle percentages are augmented and the ammonia emission is decreased.

Improved faeces consistency has a noticeable effect on air quality, reducing respiratory diseases. This, in turn, leads to an additional growth in animal productivity and minimizes stable maintenance efforts – irrespective of the stable system used.

Raw fibre from 100% natural raw material

Sustainable increase

The success of raw fibre concentrates used in poultry production has been repeatedly proven by numerous scientific studies. In addition to mortality rates that are significantly lower while the final fattening weights are higher, the percentage of quality meat per animal increases by 10%.

Application

JELUVET is simply admixed and is available in powder (JELUVET P) and granular form (JELUVET PKS). It has outstanding free-flowing and machine-compatible properties. JELUVET is manufactured from controlled pure raw materials using a HACCP-certified process and can be delivered in bags or as loose product. Own brands are possible.

In poultry production, we recommend to start with an admixture of 0.25% which is gradually augmented up to 1% (from starter to finisher).

It goes without saying that JELUVET is certified!

QS – Quality scheme for food

In short: JELUVET

- Prevents diarrhoea and improves intestinal health
- Enhances protein absorption and reduces ammonia emission
- Augments slaughter yield, while reducing fat and increasing muscle content
- Improves air quality in the stable, thus reducing respiratory diseases
- Makes stable maintenance more efficient and lowers labour costs

JELU-WERK – Your reliable partner

- Production exclusively in Germany and according to ISO 9001/2000, HACCP, QS
- 100 years of natural fibre innovation
- Centred on quality and service, flexible, worldwide business activities

We are happy to demonstrate our proficiency and the quality of our products, and we look forward to hearing from you!

JELU-WERK Ludwigmühle
Natural fibres. Simple and effective.
